Project 5: QA Test Evidence & Traceability

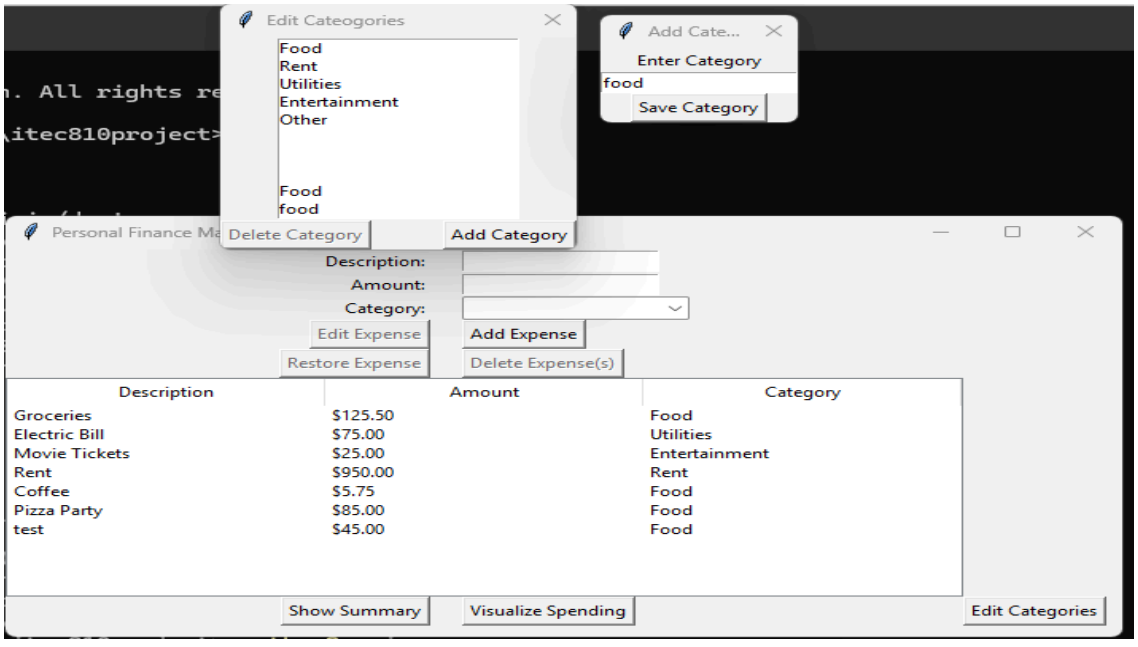

Figure 1: Edge-Case & Defect Testing (Issue #21)

#21-Special-Character-InputTest-EdgeCaseTesting]

Caption: Testing edge-case validation by inputting special characters (!@#$%^&*()). The application gracefully handles the input without crashing, validating the reliability of the UI persistence layer.

Figure 2: Category Management Logic (Issue #1)

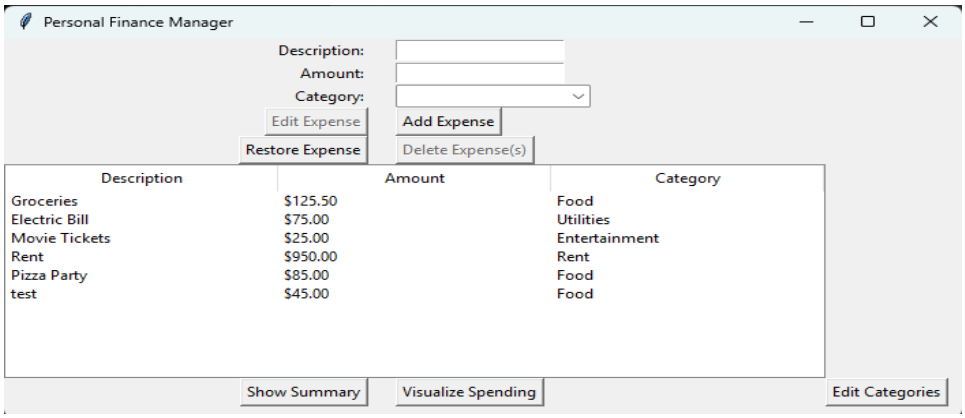

#1 Test2-DuplicateCase

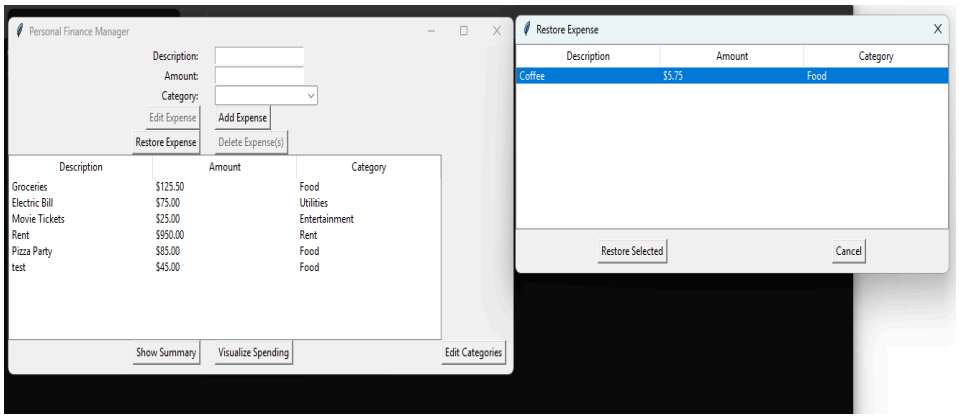

Caption: Verifying category management logic by attempting to add a lowercase duplicate ("food") when an uppercase version ("Food") already exists, ensuring the system handles case-sensitivity and duplicates correctly.

Figure 3: Data Integrity & Restore Verification (Issue #22)

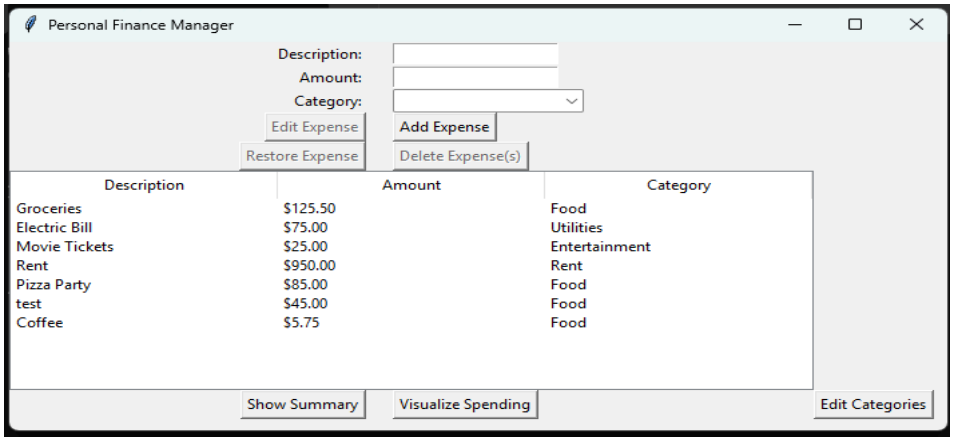

1.

2.

3.

Test01_Restore_Single_HappyPAtch OR Test2_Delete3Expenses

Caption: Successful Restore Verification. Step From 1-3. The deleted expense was restored and correctly appended to the bottom of the list, confirming that the recycle bin logic preserves data integrity without corrupting the JSON state.
